Conjoined Public Inquiry Mid Wales Wind Farm Applications

---

Sir/Madam

My serious concern is about the effects of the proposed wind farms along the power line transmission route which will run through or very close to my village of Llansanffraid in Powys on it's way from the hub to the national grid

The power line if implemented, whether overhead or underground, will give rise to; serious flooding implications, adverse effects on tourism, loss of visual amenity, disastrous effects on wildlife populations.

For these reasons it is essential that the effects of the power transmission line route from the hub to the national grid are considered alongside the wind farms applications.
