

Public Inquiry re Combined Applications Mid Wales

Statement of Case

As the National Grid high voltage connection and substation would be a direct consequence of the proposed wind farms it appears wholly reasonable that they form part of the public inquiry.

The inquiry would be incomplete if it were not to consider them.

I therefore object to both the proposed wind farms and the National Grid connection for the following reasons:

- 1) Adverse impact on the environment in general and relating specifically to climate change considerations.
- 2) Adverse impact on local economy
- 3) Loss of amenity for local population
- 4) Economic loss to local population
- 5) Flawed documentation and inconsistent arguments presented by National Grid
- 6) Transport considerations
