### OUTLINE OBJECTION

- 1 - windfactors cannot meet their overall objectives of reducing CO2 in the atmosphere, nor reducing dependency on fossil fuel until , and if , a solution to storage of electricity can be demonstrated.
- 2 - environmental effects such as infrasound are not understood so cannot be ruled out as health hazards
- 3 - Flooding of the Severn valley is already a national problem, and will be exacerbated by destruction of forests and the underlying peat beds which will in turn release CO2
- 4 - this area will be brought to its knees by the unacceptable increase in construction traffic
- 5 - there will be no benefit to this area in high value jobs, and there will be losses due to tourism disruption
